

7 electrical contact between the electrical conductor and the electrically conductive prong,
8 wherein said plurality of gripping fingers can be clamped onto the electrical conductor and
9 the body cap attached to the body such that the body cap secures the gripping collar to the
10 body and the electrical conductor to the electrical connector.

C1
1 15. The electrical connector according to claim 14, wherein said body cap is threadably
2 attachable to the body.

1 16. The electrical connector according to claim 14, further comprising:
2 a second electrically conductive prong attached to the body and in electrical contact with said
3 electrically conductive prong;
4 a second gripping collar having a second plurality of gripping fingers; and
5 a second body cap attachable to the body,
6 wherein an end of a second electrical conductor can be passed through the second body cap
7 and through the second gripping collar and driven onto the second electrically conductive
8 prong such as to make electrical contact between the second electrical conductor and the
9 second electrically conductive prong and electrical contact between the electrical conductor
10 and the second electrical conductor, wherein said second plurality of gripping fingers can be
11 clamped onto the second electrical conductor and the second body cap attached to the body
12 such that the second body cap secures the second gripping collar to the body and the second
13 electrical conductor to the electrical connector.

1 17. The electrical connector according to claim 14, wherein said gripping collar and said
2 body are separate.
